What are the key risks that are specific to the Issuer?

Credit risk

As part of its trading operations, the Issuer enters into loans, OTC derivatives, securities lending transactions and other financial transactions with a number of counterparties. Credit risk is the risk of loss that the Issuer may incur as a result of borrowers or other counterparties of the Issuer defaulting on their payment obligations in respect of such transactions, including the risks attaching to the Issuer's customers having financial difficulties and risks relating to large exposures, which could impact the Issuer's ability to meet its obligations under the Notes.

Market risk

The Issuer faces market risks as an inherent part of its business. The Issuer's market risk relates to the risk of loss that the Issuer may incur because of adverse developments in market values resulting from fluctuations in interest rates, credit spreads, foreign currency exchange rates and equity and commodity prices. The performance of financial markets may cause changes in the value of the Issuer's investment and trading books which may adversely affect the Issuer's financial position, including reducing its revenue which, in turn, could prevent the Issuer from fulfilling its payment obligations under the Notes.

Liquidity risk

The Issuer is subject to liquidity risk, being the risk that a lack of funding prevents the Issuer from being able to finance its activities (i.e. to ensure the growth of its assets or perform its obligations as they fall due). The Issuer is subject to the following types of liquidity risk:

* physical liquidity risk, being the risk of default by the Issuer on its liabilities to counterparties in any currency because of a shortage of cash or non-cash funds; and

* structural liquidity risk (i.e. concentration risk), being the risk of a significant deterioration of the Issuer's physical or regulatory liquidity due to an imbalance in the Issuer's asset and liability structure, which arises from a mismatch between the maturity of the Issuer's assets and liabilities. Although an unmatched position potentially enhances profitability, it can also increase the risk of losses for the Issuer.

If the Issuer is unable to finance its activities due to a lack of liquidity, this could lead creditors to form a negative view of Issuer's liquidity. This could result in higher borrowing costs and decreased access to various funding sources for the Issuer, which, in turn, could have an adverse effect on the Issuer's business, results of operations, financial position or prospects.

Insolvency risks under Cypriot law

The insolvency proceedings to which the Issuer could be subject to in Cyprus are (i) receivership, (ii) administration and (iii) winding up (a) by the court, (b) voluntarily by its shareholders or creditors or (c) subject to the supervision of the court. As the Notes are unsecured obligations, in the event of the insolvency of the Issuer, Noteholders would be unsecured creditors of the Issuer (and each Noteholder would rank *pari passu* with each other) and, depending on the size of the insolvency proceeds recovered following such insolvency, each Noteholder may receive less than it would have expected to receive under the Notes (and this may be less than its initial investment).

Risk factor relating to the ultimate shareholder of the Issuer

The ultimate shareholder owning and controlling the Issuer is Oleg Mikhasenko, who is the sole ultimate beneficial owner of the Group. The Issuer does not have any specific measures in place to ensure that this position of control is not abused. If such position of control is abused, this could have a material adverse effect on the Issuer's financial condition, results of operations and future prospects which may, in turn, result in the Issuer being unable to fulfil its obligation to Noteholders under the Notes.

Risks factors relating to the Russian Federation

Economic, political and legal uncertainty in Russia could have a material adverse effect on the Issuer. A significant proportion (roughly 20 per cent.) of the Issuer's revenue is derived from Russian investors and, as such, a large number of the Issuer's counterparties are based in Russia. Instability in Russia (as further described in more detail in the risk factors below) could seriously impact Russian counterparties' ability to invest which could lead to a reduction in the

Issuer's revenue. Any such reduction in revenue could potentially affect the Issuer's ability to make payments to Noteholders under the Notes in part or in full.

In addition, there are specific risks arising from the fact that the Notes are linked to the underlying Shares and investment in the Notes will entail significant risks not associated with an investment in a conventional debt security. Risk factors in relation to Share linked Notes include: (i) exposure to the Shares, similar market risks to a direct equity investment, potential adjustment events or extraordinary events affecting the Shares and market disruption or failure to open of an exchange which may have an adverse effect on the value and liquidity of the Shares; and (ii) that the Issuer will not provide post-issuance information in relation to the Shares. What are the key risks that are specific to the Issuer?

Credit risk

As part of its trading operations, the Issuer enters into loans, OTC derivatives, securities lending transactions and other financial transactions with a number of counterparties. Credit risk is the risk of loss that the Issuer may incur as a result of borrowers or other counterparties of the Issuer defaulting on their payment obligations in respect of such transactions, including the risks attaching to the Issuer's customers having financial difficulties and risks relating to large exposures, which could impact the Issuer's ability to meet its obligations under the Notes.

Market risk

The Issuer faces market risks as an inherent part of its business. The Issuer's market risk relates to the risk of loss that the Issuer may incur because of adverse developments in market values resulting from fluctuations in interest rates, credit spreads, foreign currency exchange rates and equity and commodity prices. The performance of financial markets may cause changes in the value of the Issuer's investment and trading books which may adversely affect the Issuer's financial position, including reducing its revenue which, in turn, could prevent the Issuer from fulfilling its payment obligations under the Notes.

Liquidity risk

The Issuer is subject to liquidity risk, being the risk that a lack of funding prevents the Issuer from being able to finance its activities (i.e. to ensure the growth of its assets or perform its obligations as they fall due). The Issuer is subject to the following types of liquidity risk:

* physical liquidity risk, being the risk of default by the Issuer on its liabilities to counterparties in any currency because of a shortage of cash or non-cash funds; and

* structural liquidity risk (i.e. concentration risk), being the risk of a significant deterioration of the Issuer's physical or regulatory liquidity due to an imbalance in the Issuer's asset and liability structure, which arises from a mismatch between the maturity of the Issuer's assets and liabilities. Although an unmatched position potentially enhances profitability, it can also increase the risk of losses for the Issuer.

If the Issuer is unable to finance its activities due to a lack of liquidity, this could lead creditors to form a negative view of Issuer's liquidity. This could result in higher borrowing costs and decreased access to various funding sources for the Issuer, which, in turn, could have an adverse effect on the Issuer's business, results of operations, financial position or prospects.

Insolvency risks under Cypriot law

The insolvency proceedings to which the Issuer could be subject to in Cyprus are (i) receivership, (ii) administration and (iii) winding up (a) by the court, (b) voluntarily by its shareholders or creditors or (c) subject to the supervision of the court. As the Notes are unsecured obligations, in the event of the insolvency of the Issuer, Noteholders would be unsecured creditors of the Issuer (and each Noteholder would rank *pari passu* with each other) and, depending on the size of the insolvency proceeds recovered following such insolvency, each Noteholder may receive less than it would have expected to receive under the Notes (and this may be less than its initial investment).

Risk factor relating to the ultimate shareholder of the Issuer

The ultimate shareholder owning and controlling the Issuer is Oleg Mikhasenko, who is the sole ultimate beneficial owner of the Group. The Issuer does not have any specific measures in place to ensure that this position of control is not abused. If such position of control is abused, this could have a material adverse effect on the Issuer's financial condition, results of operations and future prospects which may, in turn, result in the Issuer being unable to fulfil its obligation to Noteholders under the Notes.

Risks factors relating to the Russian Federation

Economic, political and legal uncertainty in Russia could have a material adverse effect on the Issuer. A significant proportion (roughly 20 per cent.) of the Issuer's revenue is derived from Russian investors and, as such, a large number of the Issuer's counterparties are based in Russia. Instability in Russia (as further described in more detail in the risk factors below) could seriously impact Russian counterparties' ability to invest which could lead to a reduction in the

Issuer's revenue. Any such reduction in revenue could potentially affect the Issuer's ability to make payments to Noteholders under the Notes in part or in full.
